

Garage Door Compatibility Guide

Linear Z-Wave Garage Controller (GD00Z)

The GD00Z Garage Door Opener Remote Controller opens or closes a sectional garage door remotely through a Z-Wave certified gateway or security panel. Installers only need to pair the unit into the gateway, mount the unit, connect two wires, and plug it in.

Important: The Linear Z-Wave Garage Door Controller is not compatible with any MyQ or Assurelink motor. For more information about installing and troubleshooting the Linear Z-Wave Garage Controller (GD00Z), see [Linear Z-Wave Garage Controller](#).

LiftMaster MyQ Internet Gateway (828LM)

Add smartphone control to MyQ enabled products that don't have built-in Wi-Fi (includes garage door openers, gate operators and lights with the MyQ logo). Check the status and control your garage doors from anywhere. Receive real-time alerts and create schedules.

For more information about installing and troubleshooting the LiftMaster MyQ Internet Gateway (828LM) and other garage door solutions, see [Garage](#).

MyQ Internet Gateway & Wall Control (828LM + 888LM)

Add MyQ and Security+ 2.0 to older model Garage Door Openers. Control and monitor activity from your smartphone with the MyQ app.

For more information about installing and troubleshooting the MyQ Internet Gateway & Wall Control (828LM + 888LM), see [LiftMaster MyQ \(888LM and 828LM\)](#).

LiftMaster MyQ Smart Garage Hub (821LM, 821LMB, MyQ G0301-D)

Add smartphone control to most opener brands. Check the status and control your garage doors or MyQ lights from anywhere. Receive real-time alerts and create schedules. Easy to install in the garage within Wi-Fi range.

For more information about installing and troubleshooting the LiftMaster MyQ Smart Garage Hub, see [LiftMaster MyQ Smart Garage Hub](#).

* Alarm.com recommends these devices based on an observed advantage in the ease of installation

** LiftMaster 8500 motor requires the enrollment of the 888LM that ships with it

LiftMaster/Chamberlain Wi-Fi garage door opener

LiftMaster/Chamberlain manufacture Wi-Fi enabled garage door openers that can be associated with Alarm.com customer accounts.

To verify if the garage door opener is Wi-Fi compatible

Refer to the garage door opener's manual. If it is compatible with Wi-Fi:

- The manual includes Wi-Fi enrollment instructions.

- The product model number located on the end panel label includes a W (e.g. 8550W or HD950WF).

- There may be a Wi-Fi icon next to the MyQ icon as shown in the following image.

Important: If the garage door opener does not include the preceding items but has a MyQ logo with a yellow learn button, the garage door is only MyQ-enabled and requires the LiftMaster MyQ Internet Gateway (828LM) to enroll with Alarm.com.

If it is verified that the garage door opener is a LiftMaster/Chamberlain Wi-Fi garage door opener, no additional equipment is needed to connect the garage door opener to Alarm.com except a consistent internet connection.

For information about enrolling a Wi-Fi garage door opener to Alarm.com, see [LiftMaster/Chamberlain Wifi Garage Door Opener Installation Guide](#).
