

What features are available with Connected Car?

The following features are available with Connected Car on Alarm.com.

Self-Installation

Alarm.com's Connected Car has a step-by-step guide on the Add Device Portal that walks the user through how to install the Car Connector.

Alarm.com Places

Connected Car allows users to automate smart home settings based on the location of their vehicle. This can save them time and money by enabling Alarm.com Places to automatically adjust and send alerts for home automation devices.

When the Car Connector is added to the account, it is automatically added as a Geo-Device.

Note: Connected Car uses GPS accuracy, which allows for the use of a smaller Geo-Fence.

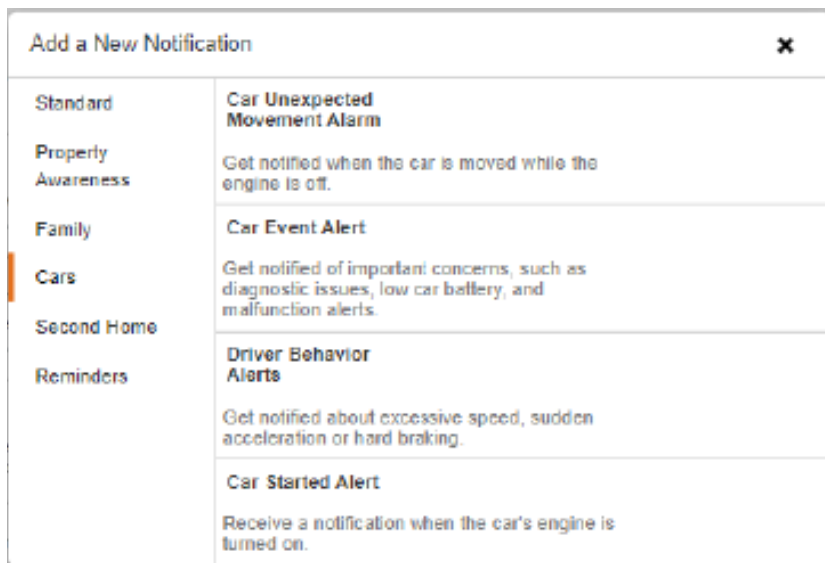

Home automation and alerts

The following home automation and alerts can be created when Alarm.com Places is configured:

- Trigger lights when the car's Geo-Device leaves or enters a Geo-Fence.
- Trigger thermostats when the car's Geo-Device leaves or enters a Geo-Fence.
- Pause video rules while the car's Geo-Device is within a Geo-Fence.
- Send alerts if the car's Geo-Device leaves a Geo-Fence without closing the garage door, locking the front door, or arming the system.

Vehicle monitoring notifications.

Connected Car allows users to monitor their vehicle's location, diagnostics, and behavior. When users configure notifications, they can receive alerts about vehicle maintenance, unexpected movement, and more! Connected Car provides constant awareness and helpful insights, even when the car is parked with the engine off.

Add a New Notification ✕	
Standard	Car Unexpected Movement Alarm
Property Awareness	Get notified when the car is moved while the engine is off.
Family	Car Event Alert
Cars	Get notified of important concerns, such as diagnostic issues, low car battery, and malfunction alerts.
Second Home	Driver Behavior Alerts
Reminders	Get notified about excessive speed, sudden acceleration or hard braking.
	Car Started Alert
	Receive a notification when the car's engine is turned on.

Thresholds for these alerts can be configured by going to the Car Settings page using the customer website or customer app.

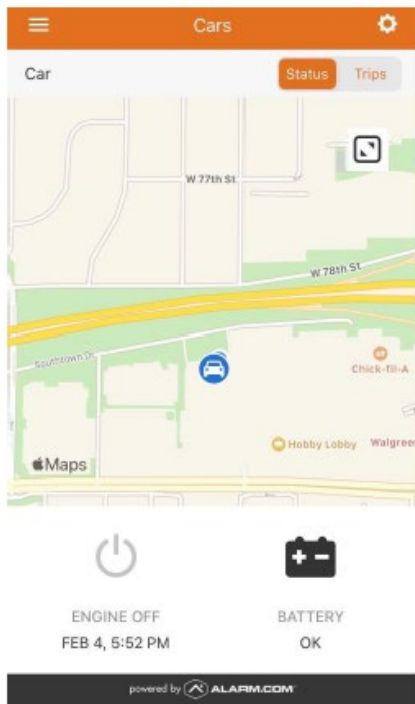

View real-time data

Maintenance alerts and real-time data in the mobile app help keep vehicles in good working order.

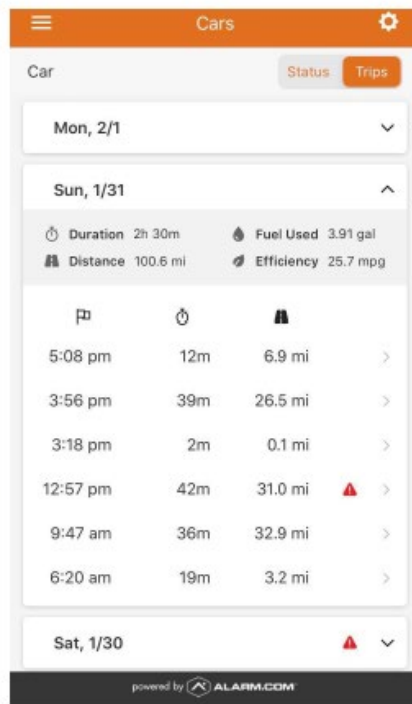

-  Check Engine
-  Low Battery
-  Low Fuel
